P., 116° C. It is the nucleus of a large number of organic substances, among which are several plant alkaloids, as nicotine, and certain of the ptomaines. It is used in denaturing alcohol, and as an antiseptic, germicide, and remedy for asthma. Structurally, pyridine may be considered as benzene in whose molecule one CH group has been replaced by a nitrogen atom. In describing its derivatives, it is customary to designate the five carbon atoms of the ring as α, β, γ, β', α', or 1, 2, 3, 4, 5, commencing with one of those adjacent to nitrogen. Thus, there are three monocarboxylic derivatives, $C_5H_4N{\cdot}CO_2H$: *picolinic acid* (α), *nicotinic acid* (β), and *isonicotinic acid* (γ). There are six dicarboxylic derivatives, $C_5H_3N(CO_2H)_2$: *quinolinic acid* ($\alpha\beta$), *lutidinic acid* ($\alpha\gamma$), *dipicolinic acid* ($\alpha\alpha'$), *isocinchomeronic acid* ($\alpha\beta'$), *dinicotinic acid* ($\beta\beta'$), and *cinchomeronic acid* ($\beta\gamma$). Among the tricarboxyl derivatives are : *carbocinchomeronic acid* ($\beta\gamma\beta'$), *berberonic acid* ($\alpha\beta'\gamma$), and *carbodinicotinic acid* ($\alpha\beta\beta'$).

No thoroughly reliable account of it is preserved, but it appears that number was the supreme concept and metaphysical principle of the system, and the Pythagoreans are known to have made considerable advances in mathematics and astronomy. They originated, among others, the doctrine of the harmony of the spheres. To Pythagoras himself are ascribed the doctrine of metempsychosis and the teaching that earthly life is only a purification of the soul. Cf COUNTEREARTH.

They fell in the third year of the Olympiad, about the middle of August. Q (kū). **1.** The seventeenth letter of the English alphabet. It has but one sound (that of *k*), and is always followed by *u*, the two letters together being sounded like *kw*, except in some words in which the *u* is silent. See *Guide to Pron.*, § 219. Q is found but rarely in Anglo-Saxon, *cw* (in early use also *cu*) being commonly used instead of *qu*; as in *cwic*, quick; *cwen*, queen. The name (kū) is from the French *ku*, which is from the Latin name of the same letter; the form is from the Latin, which derived it, through a Greek alphabet, from the Phœnician, the ultimate origin being perhaps Egyptian. See ALPHABET, *Illust.* Etymologically, *q* or *qu* is most nearly related to *c* (*ch*, *tch*), *p*, *g*, and *wh*; as in *cud*, *quid*, L. *equus*, *ecus*, horse, Gr. *ἵππος*, whence E. *equine*, *hippic*; L. *quod* which, E. *what*; L. *aquila*, E. *eagle*; E. *kitchen*, ME. *kichene*, AS. *cycene*, L. *coquina*.

These are further called *binary*, *ternary*, *quaternary*, etc., according as they contain two, three, four, or more variables; thus, the *quantic* $ax^3 + 3bx^2y + 3cxy^2 + dy^3$ is a *binary cubic*, denoted by $(a, b, c, d\ x, y)^3$. When the binomial coefficients are omitted, an arrowhead is put on a parenthesis, thus:). See WHO.] **1.** In general, the being so much with reference to a possible more or less; the subject to distinction without change of quality. Metaphysically, as one of the categories (see CATEGORY, 1), *quantity* is usually considered as the direct correlative of *quality* (which see); and it may be variously viewed as merely more or less, as a whole made up of parts, as a continuum, or as a succession or series of elements in some sense like one another and so as measurable. Psychologically, two types of *quantity* are discriminated, *intensity* (see INTENSITY, 3), or *intensive magnitude* (which see), is an indeterminate, unmensurable quantum; all other *quantities* exhibit the character of having part out of part, or *extension*, resolving into some form of divisible, measurable continuity. Cf. def. 7, below.

> *Quantity* is therefore in its very nature an infinite series — infinitely divisible and infinitely continuable. *W. T. Harris.*

2 Spatial dimension, whether cubic, plane, or linear; magnitude; extension. *Rare exc. Math.*

3. Amount or portion; either, a measurable or numerable amount; or, loosely, any amount capable of increase or decrease in kind; sometimes, a determinate or estimated amount; sometimes, an indefinite amount; variously, bulk; extent; size; number; sum; degree.

> In neither aught, or in extremity. *Shak.*

b Great or considerable amount; as, a medicine in *quantities*, that is, in large quantities.

> The *quantity* of extensive and curious information which he had picked up. *Macaulay.*

5. a *Phon. & Pros.* Length or brevity of sounds (chiefly vowel sounds) or of syllables as measured by the time required to pronounce them. As a term of prosody, *quantity* is used chiefly of Greek and Latin verse, in which the meters are based upon it, the length of a syllable as *long* or *short* mainly depending upon the vowel utterance, common syllables (admitting of metrical use as either long or short) being such as are long by position (see POSITION, 3). The so-called long and short vowels in English (as long *a* and short *a*, etc.) have qualitative difference and afford no real analogy to the prosodic quantities of the classic languages. Quantities are usually indicated by the quantity marks called macron (–) for the long, and breve (⏑) for the short, common quantity being indicated by the two combined (⏓). Cf. LONG, *a.*, 7. **b** *Music.* The relative duration of a tone.

6. *Math.* Whatever may be operated upon according to fixed mutually consistent laws; particularized magnitude; one of a kind of terms that may be equal; — distinguished from a *magnitude*, which is one of a kind of terms that may be greater or less. A yardstick is a *quantity*, its length is a magnitude; a sphere surface is a *quantity*, its area is a magnitude. The relations of *greater* and *less* (which are indefinable, asymmetric, transitive, inconsistent, and converses of each other) hold not between quantities, but between the magnitudes of the quantities; these latter result always from particularizing magnitudes by spatial, temporal, spatio-temporal, or relational specifications; two quantities that result from particularizing the same magnitude are called *equal*. See MAGNITUDE, 4.

7. *Logic.* **a** In reference to terms and conceptions, (1) their extension, (2) their intension, or comprehension. Some logicians recognize a third quantity, called *information*. **b** In reference to propositions, the characteristic which makes them universal or particular, to which some add singular. See MODE, 3 **b**, first figure.

quotation mark. *Punctuation.* One of the marks used to indicate the beginning and the end of a quotation. In general English usage they are two inverted commas at the beginning, and two apostrophes at the end. A quotation within a quotation so marked is generally set off by single marks, as, "The youth replies, 'I will!'" Single marks, however, are often, esp. in British printing, used instead of double. Matter quoted within a quotation so marked has the double marks. Quotation marks inclose any other punctuation marks of the passage quoted, as in the instance just given, with which compare: "Shall you reply, 'I will'?" The initial quotation marks are repeated with each paragraph or stanza (now rarely, as was once a practice, with each line) of the quoted text. In German the quotation marks are commonly paired commas and inverted commas ; as, „Leb' wohl!" In French they are commonly as in the following : «*Adieu!*»

ra/di-um (rā'dĭ-ŭm), *n.* [NL., fr. L. *radius* ray.] *Chem.* An intensely radioactive metallic element found (combined) in minute quantities in pitchblende, carnotite, and other uranium minerals. Symbol, *Ra ;* atomic weight, 226.4. Radium was discovered by M. and Mme. Curie, of Paris, who in 1902 separated compounds of it by a tedious process from pitchblende. Its compounds color flames carmine and give a characteristic spectrum. It resembles barium chemically. Radium preparations are remarkable for maintaining themselves at a higher temperature than their surroundings, and for their radiations, which are of three kinds : *alpha rays, beta rays,* and *gamma rays* (see these terms). By reason of these rays they ionize gases, affect photographic plates, cause sores on the skin, and produce many other striking effects. Their degree of activity depends on the proportion of radium present, but not on its state of chemical combination or on external conditions. The radioactivity of radium is therefore an atomic property, and is explained as resulting from a disintegration of the atom. This breaking up occurs in at

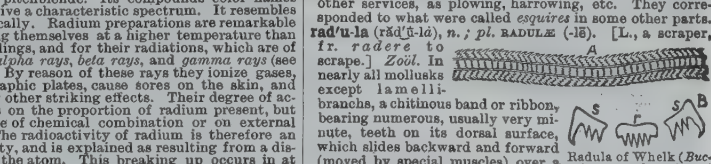

Diagram showing Disintegration of a Radium Atom, according to Rutherford. The times given are estimated periods in which a sample of each substance is half transformed into the next.

least seven stages ; the successive main products have been studied and are called **radium emanation** or *exradio,* **radium A, radium B, radium C,** etc. (The emanation is a heavy gas, the later products are solids.) These products are regarded as unstable elements, each with an atomic weight a little lower than its predecessor. It is possible that lead is the stable end product. At the same time the light gas helium is formed ; it probably consists of the expelled alpha particles. The heat effect mentioned above is ascribed to the impacts of these particles. Radium, in turn, is believed to be formed indirectly by an almost immeasurably slow disintegration of uranium.

2. *Anat. & Zoöl.* The preaxial one of the two bones of the forearm, or corresponding part of the fore limb of vertebrates above fishes. The lower end is broad, and articulates with the proximal bones of the carpus, so that rotation of the radius involves also that of the hand (cf. PRONATION, SUPINATION). Syn. — RAISE, LIFT, ELEVATE, EXALT, HEIGHTEN, ENHANCE are often variously interchangeable. To ELEVATE (both lit. and fig.) is esp. to raise above the usual position, attitude, or state; to EXALT (chiefly fig.) is to elevate in rank, power, or the like; the word often implies such elevation of spirits as accompanies high emotional or nervous tension; as, to *elevate* the grade of a street; cf. an *elevated* railroad, an *elevated* style, *elevation* of temperament. "He that humbleth himself shall be *exalted*" (*Luke* xiv. 11); "all the intensity of feeling which *exalted* me" (*Richard Jefferies*); cf. "a nervous *exaltation* which made her frame as responsive as a bit of finest Venetian crystal" (*G. Eliot*). To HEIGHTEN is esp. to intensify; ENHANCE often adds the implication of a raising in value or attractiveness; as, "to a subtle sense, a sense *heightened* by sympathy" (*Lowell*); "The water . . . *heightens* the poetical associations" (*Byron*); "those little rubs which Providence sends to *enhance* the value of its favors" (*Goldsmith*); "glooms that *enhance* and glorify this earth" (*M. Syn. — Substantive, positive, absolute, veritable, genuine, authentic. — REAL, ACTUAL, TRUE. REAL implies primarily substantive or objective existence — what *is*; ACTUAL, emergence in the sphere of action or fact — what has *become*; TRUE, conformity or correspondence to what is actual or real. *Real* is opposed to *imaginary*; as, the *real* George Washington; to *artificial*; as, *real* gems; to *counterfeit*; as, "a *real* ancient medal and a counterfeit" (*Wordsworth*); to *factitious*; as, one's *real* name; to *ostensible*; as, one's *real* reason; to *nominal*; as, the *real* attendance. *Actual* is opposed to *potential*; as, the *actual* energy of heat; to *constructive*; as, *actual* fraud; to *virtual*; as, *actual* identity; to *theoretical* or *hypothetical*; as, to illustrate by an *actual* case. It is also opposed, in the sense of "now existing, present, current," to *past* or *future*; as, not what has been or may be, but the *actual* situation, confronts us. Both *real* and *actual* may be opposed to *ideal*; as, *ideal* conditions, contrasted with *actual*, *real* conditions. *True* is opposed to *false*; as, a *true* story; and to *erroneous*; as, the *true* version of a story. With the shades of difference indicated, the three words are occasionally interchangeable; as, the *real*, *actual*, *true* state of affairs. The interpretation of the doctrine varies. In the Roman Catholic Church the presence is held to be substantial, the substance of the bread and wine being held to be converted into the real body and blood of Christ (*transubstantiation*). In the Lutheran Church it is held that while the nature of the bread and wine remains unaltered, yet the body and blood are so inseparable from them that the bread and wine are the true body and blood of Christ and are given and received not only by the godly, but also by wicked Christians. In the Anglican Church it is held that the presence is spiritual but none the less real. — **r. price.** See PRICE, *n.*, 2. — **r. property.** See REAL ESTATE, above. — **r. ratio of expansion.** *Steam Engin.* See RATIO OF EXPANSION. — **r. rent**, *Scots Law*, the gross annual value of a holding given in the valuation rolls made for allocation of poor rates. — **r. representative.** *Law.* See REPRESENTATIVE, *n.*, 1 **b**. — **r. reserve.** See RESERVE. — **r. scholar**, a pupil or graduate of a Realschule. — **r. school**, a partial translation of *Realschule*. — **r. servitude.** See SERVITUDE, *n.*, *Law*. — **r. stock**, *Stock Exchange*, stock held by a bona-fide owner. — **r. tare.** See TARE. — **r. treaty.** See TREATY.

F. *réalgar*, Sp. *rejalgar*.] *Min.* Arsenic monosulphide, AsS, an orange-red mineral of resinous luster, occurring in monoclinic crystals or in granular or compact form. It burns with a bluish flame, giving off arsenical and sulphurous fumes. H., 1.5–2. Sp. gr., 3.56. It is used in pyrotechny in making "white fire," and was formerly much in use as a pigment.

re'al-ism (rē'ăl-ĭz'm), *n.* [Cf. F. *réalisme*, G. *realismus*.] **1.** *Philos.* a The doctrine of the realists as opposed to nominalism. It is sometimes correctly enough traced to Plato's doctrine of ideas (see IDEA, 9) and to Aristotle's doctrines of formal cause, entelechy, energeia, and creative reason (see ARISTOTELIANISM, ESSENCE, 9, SUBSTANCE, ENTELECHY, and NOUS, 1). The ancient realists held that the objects of sense perception are derivative from higher realities, or formative causes. Substantially the same is the modern view: all individual things and events are fleeting and transitory; each thing has its history; it originates in some former thing or process of things, runs its course of action and interaction with other things, and finally disappears, giving place to another, its successor. Its whole history belongs to the causal process which originated it, and modified it, and finally removed it and replaced it. The causal process was a higher reality. For it furnished all the reality of the thing while it lasted, and finally it furnished the reality of its successor, in which the thing perished. The doctrine of nominalism was erroneous, in that it supposed all reality to be confined to individual things and dead results, whereas objects of sense perception exist and have their being in causal processes which are higher realities because they contain not only the producing power that originates the things, but also the destructive power that causes them to perish. All general terms regarded by nominalism (which see) as "flatus vocis," or mere names without corresponding reality, point more or less to a synthesis of causes which has produced the thing or quality noted by our sense perception as having reality. The causal reality is more potent — has a higher degree of reality — or else it could not produce the thing before us. This particular object, for example an acorn, presupposes causal process, and it is a link in the causal chain presupposing an oak antecedent, and after it another oak that may grow from it, or indeed a forest of oaks. The reality of the particular individual at once leads back and forward to more extensive reality as a living cause. Take the object this rock, or this house, or this planet; science begins by seizing the causal process in which it is found and in place of the sense reality it has a reality of inference, a continually widening reality and more intensely real as it widens. There is a pantheistic realism which, like Herbert Spencer's ultimate force, is the origin of the whole evolution process found in nature and also the goal or ultimate return of the counter movement which sets in when evolution culminates. That ultimate real force is the birth and the grave of all evolved realities. The theistic and most of the idealistic theories of realism find the absolute to be a Creative Reason.
W. T. Harris.

b The doctrine that objects of sense perception (and hence, in extended use, the physical world generally) have obj. c tive being, independent of mental or psychical fact; — opposed to *idealism*. See NATURAL REALISM.

2. a Preoccupation with, or devotion to, fact; specif., emphasis on practical subjects in education. b A concrete fact. *Rare.*

3. In art and literature, fidelity to nature or to real life; representation without idealization; adherence to actual fact. As a consciously professed principle, realism was opposed, in 19th-century critical discussions, to *romanticism* (which see), taken as typically subjective, and inclining to the sentimental and extravagant. Its adherents have laid stress on the rendering of literal fact, on "truth to nature" without selection either of subject or detail in the interest of preconceived ideals. The term is applied in a favorable sense to denote accuracy and graphicalness in delineation, and depreciatively to denote excessive minuteness of detail and preoccupation with trivial, sordid, or offensive subjects. Cf. IDEALISM, 3, NATURALISM, 4.

4. *Law.* The tendency to treat rights and obligations as in any way connected with a fixed place, or to annex rights or obligations to land. *Pollock & Mait.*

Syn. — REALITY, REALISM are here compared as they apply to representations of what is real. re-bel'lion (rē-bĕl'yŭn), *n.* [F. *rébellion*, L. *rebellio*. See REBEL, *v. i.*] **1.** Act of rebelling; open renunciation of the authority of the government to which one owes obedience, and resistance to its officers and laws, either by levying war or aiding others to do so; an organized uprising of subjects in order to coerce or overthrow their lawful ruler or government; revolt; insurrection.

The term *rebellion* is applied to an insurrection of large extent, and is usually a war between the legitimate government of a country and portions or provinces of the same who seek to throw off their allegiance to it and set up a government of their own.

Instructions for Gov. of the Armies of the U. S.

2. Open resistance to, or defiance of, any authority.

3. Specif.: *Law.* Disobedience to a legal command or summons, formerly resulting in actual outlawry and later in certain penalties. *Obs. or Hist., exc. in Scots Law.*

Syn. — REBELLION, REVOLUTION, REVOLT, INSURRECTION, MUTINY. REBELLION is open, organized, and armed resistance to constituted authority; REVOLUTION, as here compared, implies the overthrow of one government and the substitution of another; as, Jack Straw's *Rebellion*, the Great *Rebellion* (1642-52); the *Revolution* of 1688; the American *Revolution*; the French *Revolution*. But the two words are often used of the same event, according to the point of view of the user. REVOLT and INSURRECTION denote an armed uprising against authority which does not attain the extent of a *rebellion*; MUTINY commonly denotes an insurrection against military or naval authority; as, "The enemy [was] much enfeebled, by daily *revolts*" (*Raleigh*); "*Insurrections* of base people are more furious in their beginnings" (*Bacon*); the *mutiny* of a regiment. RECIPROCAL and MUTUAL (see MUTUAL) are often used without clear distinction with the implication of an interchange of the same feeling or act; as, *mutual* aversion, *reciprocal* affection; *mutual* greetings, *reciprocal* reproaches; "whether the offense has been solely on my side, or *reciprocal*, or on yours chiefly" (*Byron*); "There is a *reciprocal* pleasure in governing and being governed" (*Johnson*). CORRELATIVE implies mutual interdependence or a complementary relation; CONVERTIBLE, as here compared, is equivalent to *interchangeable*; as, "Father and son . . . are *correlative* terms" (*Hume*); "The law, and the opinion of the judge, are not always *convertible* terms, or one and the same thing" (*Blackstone*). Clerk Maxwell*). See RECIPROCAL DIAGRAM **a**. — **r. functions.** = INVERSE FUNCTIONS. — **r. hybrids,** *Biol.*, two hybrids, one descended from the male of a given species and the female of a second species, the other descended from the female of the first species and the male of the second. — **r. polars,** *Math.*, two curves so related that as a point (or pole) traces either, the polar of this point (as to a fixed conic) envelops (or rolls around) the other. — **r. pronoun,** *Gram.*, a pronoun, such as the Greek ἀλλήλων and the English compound forms, *each other, one another*, denoting a reciprocal action or cross relation between the members comprised in a plural subject; as in, A and B like *each other* (that is, A likes B, and B likes A). — **r. proportion,** *Math.*, a proportion such that, of four terms taken in the second the same ratio which the fourth has to the third, or the first has to the second the same ratio which the reciprocal of the third has to the reciprocal of the fourth. Syn. — REDUNDANCY, TAUTOLOGY, PLEONASM, VERBOSITY, VERBIAGE, PROLIXITY, DIFFUSENESS, CIRCUMLOCUTION, PERIPHRASIS. REDUNDANCY, as here compared, is the generic term for the use of more words than are needed to express one's meaning; as, "a feeble, diffuse, showy, Asiatic *redundancy*" (*Hazlitt*). TAUTOLOGY is needless or useless repetition of the same idea in different words; PLEONASM (which may sometimes be a means of proper emphasis) denotes the use of words whose omission would leave one's meaning intact; as, "'Boldly dare' is *tautology*" (*Gray*); "It is a *pleonasm*, a figure usual in Scripture, by a multiplicity of expressions to signify one notable thing" (*South*). VERBOSITY is excessive wordiness; it differs from *pleonasm* in that it is too pervasive to be remedied by excision; VERBIAGE applies to that which is verbosely expressed, or which consists of nothing but words; as, "One of the worst plagues of society is this thoughtless, inexhaustible *verbosity*" (*Mrs. Humphry Ward*); "At once, then, and without *verbiage*, let us take up this subject" (*Thackeray*). PROLIXITY implies excessive and wearisome attention to trivial particulars; DIFFUSENESS is the opposite of *conciseness*; as, "He calls the whole drama tediously instructive, [and] there is indeed here and there *prolixity*" (*Landor*); "these enormously *prolix* harangues" (*Coleridge*); "It is too strong and concise — not *diffuse* enough for a woman" (*Jane Austen*); "The one can be profuse on occasion; the other is *diffuse* whether he will or no" (*Lowell*). CIRCUMLOCUTION and PERIPHRASIS (the more bookish term) denote a roundabout or indirect way of saying a thing; as, "Somehow I can't relish that word Hockey. Can't you supply it by a *circumlocution*?" (*Lamb*); "He was one of those anomalous practitioners in lower departments of the law who . . . on prudential reasons . . . deny themselves all indulgence in the luxury of too delicate a conscience (a *periphrasis* which might be abridged considerably)" (*De Quincey*). When stiff the reed may determine the tone by its own vibration, as usually in organs, the air column serving chiefly as resonator; or when flexible it may conform more or less to the vibration of the air column, as in the clarinet. A reed is beating *or* striking when it overlaps the opening; free, when it plays freely within the opening, the former giving orchestral effects, the latter giving smoother and mellower tones. re-flec'tion, re-flex'ion (rē-flĕk'-shŭn), *n.* [See *Note* below.] [ME. *reflexion*, F. *réflexion*.] **1.** A reflecting; state of being reflected; esp., the return of light, heat, sound, etc., from surfaces. In reflection, as of light, from a plane surface, the angle made with a perpendicular to the surface by the reflected ray (angle of reflection) is equal to that made by the incident ray (angle of incidence), and both rays are in a plane perpendicular to the surface. (See ANGLE OF INCIDENCE.) Reflection from a very even surface, as polished metal, so as to form an image, is called regular, or **specular, reflection**; from a rough surface, irregular, or **diffuse, reflection.** Reflection is usually partial, some of the light being absorbed, but total **reflection** occurs when light, in passing through a denser medium to a rarer, meets the surface at an angle greater than the critical angle. See CRITICAL ANGLE.

2. [*cap.*] Specif., in *Eccl. Hist.*, the important religious movement in western Christendom beginning early in the 16th century, which resulted in the formation of the various Protestant churches. The primary impulse to this movement, in so far as it was religious, moral, and intellectual, was the growing freedom of thought in Europe, which had manifested itself at different centers in the rejection of the Scholastic theology and the substitution of the Hebrew and Greek Scriptures as the sole sources of doctrine. The leaders opposed the preaching of indulgences; asserted the right of private use and interpretation of Scripture, and justification by faith as against conformity to rites; and rejected the doctrine of transubstantiation and the veneration of the Virgin Mary and the saints. The rising spirit of individualism and nationality, in opposition to the centralized control of the Church by the papacy marked the Reformation also as a political revolt. The movement was in some measure prepared by earlier reformers, as Wycliffe in England, Huss in Bohemia, Lefèvre in France, and immediately by Erasmus. Its leaders were Luther in Germany, Zwingli and Calvin in Switzerland, Cranmer in England, and Knox in Scotland. The propriety of the term *Reformation*, as applied to this movement, is not admitted by Roman Catholics.

Syn.—REFORMATION, REFORM. REFORMATION denotes the act or state, REFORM, the fact or result. *Reformation* implies a more comprehensive change than *reform*, which commonly applies to the amendment of some particular condition or abuse; as, the *Reformation* in Germany, the *reformation* of a criminal; tariff *reform*, the *reform* party.

[*cap.*], of the whole body of Protestant churches originating in the Reformation or, in a more restricted sense, of those churches formed in various European countries by Zwingli, Calvin, and others who separated from Luther on the doctrine of the Lord's Supper, etc., and carried the Reformation, as they claimed, to a higher point, or of their doctrines, etc. The Reformed Churches, specifically so called, are Presbyterian in polity and doctrine, but have different standards of faith and ecclesiastical terms from those of the Presbyterians. They have consistories instead of sessions, classes instead of presbyteries, and general synods instead of general assemblies. There are three Reformed bodies in the United States: (1) the **Reformed Church in America** (**Dutch Reformed** or **Reformed Dutch**) tracing its origin to the Reformed Church of Holland; (2) the **Reformed Church in the United States** (**Reformed German** or **Reformed**), a descendant of the Reformed Church in Germany; (3) the **Christian Reformed Church**, a branch of an organization of the same name in Holland, formed by a secession in 1835 from the Reformed Church of Holland.

The poet's *relation* doth well figure them. *Bacon.*

2. a State of being related or of referring; what is apprehended as appertaining to a being or quality, in considering it in its bearing upon something else; the being such and such with regard or respect to some other thing; connection; as, the *relation* of master to servant.

Any sort of connection which is perceived or imagined between two or more things, or any comparison which is made by the mind, is a *relation*. *Taylor.*

b Any aspect or quality which can be predicated only of two or more things taken together, as direction, resemblance, or of one thing considered as a factor of itself, as self-identity. Metaphysically, *relations* have been considered: (1) as purely subjective, or between ideas alone, — the *nominalistic* and *skeptic* view; (2) as referring to some real quality or essence of things by which they may be connected with one another, and hence as designating universals, or general characters of reality, — the *realistic* view; or as (3) the very stuff of reality itself, which is but a sum of relations, — the view of absolute *idealism;* and (3) as those aspects in which things have to do with one another, considered especially from the general point of view of interest, efficiency, or purpose, — the view of *pragmatism*. See RELATIVITY OF KNOWLEDGE, a.

3. Reference; respect; — esp in phrase, *in relation to*.

I have been importuned to make some observations on this art in *relation* to its agreement with poetry. *Dryden.*

4. Connection by consanguinity or affinity; kinship.

5. A person connected by consanguinity or affinity; a relative; a kinsman or kinswoman; specif., as technically construed in law (as in the interpretation of wills, statutes affecting the descent of property, etc.), a person who in case of intestacy would be entitled to a share of the property of the intestate under the statute of distributions in force in the jurisdiction in question. See CONSANGUINITY. Thus, the word not only varies in its inclusiveness according to the terms of the statute in question, but may also, according to the evident intent of the user, be construed more or less widely as meaning next of kin, relations by blood, or family relations whether by blood or marriage.

6. *Law.* **a** The referring of an act to a prior date as the time of its taking effect; the giving force or operation to an act or proceeding as of some previous date or time, by a sort of fiction, as if it had happened or begun at that time. In such case the act is said to "have *relation*" to the prior date, or "to take effect by *relation*." **b** The act of a relator at whose instance a suit is begun.

7. State of being mutually or reciprocally interested, as in social or commercial matters; also, *pl.*, dealings; affairs; as, the foreign *relations* of a country.

Syn. — Recital, rehearsal, narration, tale; kindred, kinship, consanguinity, affinity; relative, kinsman, kinswoman.

re-la'tion-al (rē-lā'shŭn-ăl), *a.* **1.** Of or pert. to kinship.

2. Of or pert. to, or specifying, a relation in general.

rel'a-tive (rĕl'ă-tĭv), *a.* [L. *relativus*: cf. F. *relatif*. See RELATE.] **1.** *Gram.* Referring to an antecedent; introducing a dependent clause qualifying an expressed or implied antecedent; as, a *relative* pronoun or adverb; — also applied to such a clause, as indicating or expressing relation.

Relative pronouns (who, that, which, whoever, whatever, whichever, that, as), *relative* adjectives (which, what, whichever, whatever), or *relative* adverbs (when, where, whereat, etc., how, why, as), referring to a noun or noun equivalent called the antecedent. *C. T. Onions.*

2. Having relationship one to another; mutually related or connected; also, corresponding.

3. *Music.* Related (in sense 4 **b**). A major and minor key are relative to each other when the descending form of the minor is identical in its tones with the major. The tonic of a minor key is the sixth of its *relative* major, and they have the same signature.

4. Having relation, reference, or application; referring; having or standing in connection; in respect or with reference (to); proportionate (to); pertaining; pertinent; relevant; as, arguments not *relative* to the subject.

5. Arising from relation; resulting from, or existing in, connection with, or reference to, something else; comparative; not absolute or independent.

Every thing sustains both an absolute and a *relative* capacity; an absolute, as it is such a thing, endued with such a nature; and a *relative*, as it is a part of the universe, and so stands in such a relation to the whole *South.*

6. a Offered or paid indirectly, as by means of an image; — said of worship. **b** Involving or implying relationship; dependent for signification on relationship to some other thing or person; — said of names, terms, etc.

7. *Law.* Designating a duty or right of one person correlating with a right or duty in another.

In the logic of relatives, the connective form of any proposition having more than one subject ("subject" including "object") is called a *relative term* or *relative rhema*. Thus, in "X is to the west of Z," "is to the west of" is the *relative term*. **— r. weed,** *Agric.*, any cultivated plant growing out of place, thus acting like a weed among other crops; — opposed to *absolute weed*.

rel'a-tive (rĕl'ă-tĭv), *n.* **1.** One that relates to, or is considered in its relation to, something else; a relative object or term; one of two objects directly connected by any relation. Specif.: **a** *Gram.* A relative pronoun or other word. **b** A thing, or, *Obs.*, a person, relative to, connected with, or dependent on, another. **c** A person connected with another by blood or affinity; strictly, one allied by blood; a relation; a kinsman or kinswoman. "Confining our care . . . to ourselves and *relatives*." *Bp. Fell.*

rel'a-tiv-ism (rĕl'ă-tĭv-ĭz'm), *n.* A doctrine of relationism or of relativity. Cf. RELATIVITY OF KNOWLEDGE **a**. **— rel'a-tiv-ist**, *n.* **— rel'a-tiv-is'tic** (-ĭs'tĭk), *a.*

rel'a-tiv'i-ty (-tĭv'ĭ-tĭ), *n.* **1.** State of being relative; as, the *relativity* of a subject. *Coleridge.*

2. *Philos.* **a** State of close dependence on another, so that the removal of that other annuls or destroys the dependent being, as of the solar system upon the sun. **b** Reciprocal dependence, as that between the individual and society, so that if either were removed the other would perish.

law of relativity. See under LAW. **— relativity of knowledge.** The doctrine that human knowledge is only relatively true or certain, or is valid only for the knowing mind. The phrase is applied chiefly: (1) to philosophies which deny the possibility of positive knowledge on account of the inconstancy of sense perceptions, and (2) to philosophies which maintain that ideas are resolvable into series of relationships having an ultimate core of "self-relation," that is, that thinking derives its whole significance from the point of view from which it starts. "We think in relations." *H. Spencer.* **— r. psychol.** The doctrine that sensations have significance only in relation to other sensations. The source of this doctrine is Hobbes's dictum that always to be aware of the same thing and not to be aware of anything amount to the same.

re-la'tor (rē-lā'tĕr), *n.* [L.: cf. F. *relateur*. See RELATE.] **1.** One that relates; a relater; narrator. *Fuller.*

Specif.: [*cap.*] **a** The transitional movement in Europe between the mediæval and the modern world, marked especially by the revival of classical design in art and letters. Its beginnings are associated with Petrarch and the humanists of the 14th century in Italy, where it led to great advances in expressional painting and sculpture, and to a return to classical design in architecture. The movement, stimulated by the momentous events of the 15th century, — the fall of Constantinople, which drove Byzantine scholars with the literature of Greece into western Europe, the invention of printing, and the discovery of America, — spread in the 16th century to France and northern Europe. In France it developed esp. in art and letters under Louis XII. and Francis I.; in England the movement was most notable in literature, following upon the impulse to classical learning given by Erasmus, Colet, More, and others; in Germany it became associated with the Reformation. By some writers the early Italian revival of the 14th and 15th centuries is distinguished as the Risorgimento (lit., "new arising"), the term *Renaissance* being applied to its 16th-century development in western and northern Europe. **b** The neoclassic style of art which prevailed at this epoch. **2.** A revival, or a state or period, of awakened interest and effort or marked improvement along any line, esp. any line of art; as, a *renaissance* of American music.

In typical cases there are two trunks, one to each kidney, formed by the bifurcation of the caudal vein, but these receive, or are largely replaced by, branches from the hind limbs in many of the higher forms. Birds possess corresponding veins, called also *renal portal*, though they do not break up into capillaries in the kidneys, but pass through them to join the femoral veins. — **r. veins,** *Anat.*, the veins which return the blood from the kidneys to the vena cava. In man there is one from each kidney, and they lie in front of the renal arteries.

2. *Biol.* The process by which plants and animals give rise to offspring. Essentially it consists of the separation or setting apart of a portion of the living substance of the parent's body, and its subsequent growth and differentiation into a new individual. The reproduction of animals may be *asexual*, the offspring being derived from a single parent, as by the cleavage or fission of the parent's body into two or more parts, or by a process of gemmation (which see). The usual and normal method of reproduction is, however, *sexual*, the offspring being derived from two parents. Even those animals which habitually reproduce asexually appear to require to resort to this method at intervals, and in many cases, as also among the higher plants, sexual and asexual reproduction occur regularly in alternate generations. In multicellular animals and plants, ordinary sexual reproduction involves the fusion or union of two *sex* or *germ cells*, one, the egg, derived from the female parent, and the other, the sperm or spermatozoön, from the male parent. From the cell thus produced (the *fertilized egg*) the offspring develops. In unicellular organisms a modification of the process occurs, a temporary or permanent union (conjugation) of the parents preceding a period of active multiplication by cell division. In certain modifications of sexual reproduction the offspring may be derived from only one parent. See FERTILIZATION, 2, CONJUGATION, 6, HERMAPHRODITE, 1, PARTHENOGENESIS.

Syn. — REPROVE, REBUKE, REPRIMAND, ADMONISH, CHIDE, UPBRAID, SCOLD, RATE, BERATE agree in the idea of reprehension. To REPROVE is to express blame or censure, often kindly or without harshness; REBUKE implies sharp or stern reproof; REPRIMAND suggests reproof that is formal, and often public or official; as, "Marcus with blushes owns he loves, and Brutus tenderly *reproves*" (*Pope*); cf. ADMONISH adds to *reprove* the implication of warning or counsel, as, "Count him not as an enemy, but *admonish* him as a brother" (*2 Thess.* iii. 15); cf. "sincere acknowledgments to both my private and public censors for their friendly *admonitions*" (*Coleridge*). To SCOLD is to chide rudely, clamorously, or with vituperation; to RATE or BERATE is to rebuke angrily or with vehemence or to assail with abusive language; as, "You may *scold* a carpenter who has made you a bad table" (*Johnson*); "Warning has steadily heated toward denunciation, and remonstrance soured toward *scolding*" (*Lowell*); "She [Elizabeth] *rated* great nobles as if they were schoolboys" (*J. R. Green*). See ANIMADVERSION, CENSURE, WARN, REMONSTRATE.

3. A groveling or very mean or despicable person.

Rep-til'i-a (rĕp-tĭl'ĭ-ȧ), *n. pl.* [NL.] *Zoöl.* A class of air-breathing vertebrates which includes the alligators and crocodiles, lizards, snakes, turtles, and their extinct allies; the reptiles. They have a completely ossified skeleton, a single occipital condyle, a distinct quadrate bone, which, however, is usually immovably articulated with the skull, and ribs which are attached to the sternum. In existing reptiles the body is nearly always covered with scales or bony plates. The heart has two auricles and one ventricle, but the latteris imperfectly divided into two chambers. Existing reptiles are cold-blooded and oviparous or ovoviviparous. The embryo has an amnion and an allantois and does not pass through a metamorphosis. In older classifications the Amphibia were included. Reptiles came into existence in the Carboniferous, attained their maximum in the Mesozoic, when they were represented by many gigantic forms, and have since, except snakes and lizards, steadily declined. The orders of Reptilia are:

Syn. — Anger, displeasure, choler, indignation; enmity, hatred, ill will, animosity, malignity, pique. — RESENTMENT, DUDGEON, MALICE, SPITE, GRUDGE, RANCOR. RESENTMENT is indignant displeasure, often mingled with animosity, esp. as excited by a sense of affront or personal injury. DUDGEON (chiefly used in the phrase "in high *dudgeon*," "in deep *dudgeon*," etc.) adds the implication of pique or ruffled temper; as, "Catherine de Vausselles, for whom he entertained a short-lived affection, and an enduring and most unmanly *resentment*" (*Stevenson*); "It is very difficult to get up *resentment* towards persons whom one has never seen" (*J. H. Newman*); cf. MALICE implies active or malignant ill will; SPITE is mean or petty malice; as, "the venomous *malice* of my swelling heart" (*Shak.*); "wit larded with *malice*" (*id.*); "in meditated fraud and *malice*, bent on Man's destruction" (*Milton*); "As hags hold Sabbaths, less for joy than *spite*" (*Pope*); cf. "be it for nothing but to *spite* my wife" (*Shak.*). A GRUDGE is a cherished feeling of resentment or sullen hostility; RANCOR is deep-seated and inveterate malice or spite; as, "*grudges* and heartburnings" (*Johnson*); "this same inveterate *grudge*" (*Hawthorne*); "Voltaire had an especial *grudge* against Habakkuk" (*E. FitzGerald*); "meanness enough to do an act of cruelty and injustice, to gratify the *rancor* of a capricious woman" (*Smollett*); "the unrelenting *rancor* against the popes" (*Landor*). In Great Britain the ultimate *real reserve* is the gold kept on hand in the Bank of England, largely represented by the notes in hand in its own banking department; and any balance which a bank has with the Bank of England is a part of its *reserve*. In the United States the reserve of a national bank consists of the amount of lawful money it holds on hand against deposits, which is required by law to be not less than 15 per cent (*U. S. Rev. Stat.* secs. 5191, 5192), three fifths of which the banks not in a reserve city (which see) may keep deposited as balances in national banks that are in reserve cities (*U. S. Rev. Stat.* sec. 5192). **c** *Life Insurance.* The amount of funds or assets necessary for a company to have at any given time to enable it, with interest and premiums paid as they shall accrue, to meet all claims on the insurances then in force as they would mature according to the particular mortality table accepted. The reserve is always reckoned as a liability, and is calculated on net premiums. It is theoretically the difference between the present value (which see) of the total insurance and the present value of the future premiums on the insurance. The reserve, being an amount for which another company could, theoretically, afford to take over the insurance, is sometimes called the **reinsurance fund** or the **self-insurance fund**. For the first year upon any policy the net premium is called the **initial reserve**, and the balance left at the end of the year including interest is the **terminal reserve**. For subsequent years the *initial reserve* is the net premium, if any, plus the terminal reserve of the previous year. The portion of the reserve to be absorbed from the initial reserve in any year in payment of losses is sometimes called the **insurance reserve**, and the terminal reserve is then called the **investment reserve**.

4. To remain or be stationed ; to make a stay. *Obs.*

Syn. — RESIDE, LIVE, DWELL, ABIDE, SOJOURN, STAY, REMAIN, LODGE agree in the idea of continuance in a given place. LIVE is the word in everyday use to express the general notion of having one's home in a place ; RESIDE is more formal, and often implies certain relations to the community in which one lives ; as, "A young woman . . . took lodgings opposite to the house in which he *lived*" (*Boswell*) ; "citizens of the United States and of the State wherein they *reside*" (*Const. of U. S.*). DWELL and ABIDE, in present usage, belong (except in *dwelling house*) to poetry or elevated prose, and connote continuance ; *dwell*, however, is little more than a poetical synonym for *live* or *reside*, while *abide* implies more of fixedness, for a shorter or longer time ; as, "She *dwelt* among the untrodden ways beside the springs of Dove" (*Wordsworth*) ; "I will *abide* in thy tabernacle forever" (*Ps.* lxi. 4) ; "We *abode* with them one day" (*Acts* xxi. 7). SOJOURN, on the other hand, is used of temporary residence ; it is a somewhat bookish term, and STAY, REMAIN, LODGE (the last with special reference to sleeping quarters) are commoner in this sense ; as, "few days' short *sojourn*" (*Milton*) ; "He *remained* at Stourbridge little more than a year" (*Boswell*) ; "the short *stay* of these strangers" (*Gilbert White*) ; "He said unto them, *Lodge* here this night" (*Num.* xxii. 8). 2. Act or fact of living or regularly staying at or in some place, either in, or as a qualification for, the discharge of a duty or the enjoyment of a benefit ; as, to be in *residence* ; (*Eccl.*) the presence of an incumbent in his benefice.

3 The place where one actually lives or has his home ; a person's dwelling place or place of habitation ; an abode. A person's place of *residence* may or may not be identical with his *domicile*, though the term *residence* is ordinarily used and legally construed as merely implying the fact of actual abode without reference to the intent necessary to constitute that abode one's domicile (which see). Legally one's residence is often determined by some special circumstance, as whether it is the place to which one has the intention of returning after an absence, or whether it is the place where one goes habitually to sleep. The residence of a wife is that of her husband ; of a child, that of its father or (the father being deceased) of its mother. The residence of a corporation is, for ordinary purposes, the place where its principal business office is located under its charter. The term **legal residence** means properly any residence recognized as such for legal purposes, but is sometimes used to designate a domicile legally recognized as such but not the place of actual residence at the time.

4. The house where one's home is ; a dwelling house ; often, one of a superior or pretentious character.

5. The place where anything rests permanently ; esp., the seat of a power, prerogative, or the like.

2. *Physics.* A prolongation or increase of sound due to the sympathetic vibration of some body capable of moving in the proper period; hence, by extension, the counterpart of this phenomenon in the case of vibrations other than sound; as, electric *resonance*. Cf. CONSONANCE, 3. Just as a series of small pulls at the right intervals will set a large bell to swinging, so resonance results from the repetition of small impulses which, when the bodies are "in tune," have a purely additive effect, but otherwise tend to neutralize one another. Thus, if a sounding string or tuning fork is placed near another of the same or a harmonic pitch, the latter also sounds. A body more nearly plate-shaped, as a piano sounding board or the body of a violin with its inclosed air, is capable of vibrating in various ways and so of reënforcing any of a number of tones. Electric resonance occurs when an electrical circuit has a natural period equal, or nearly equal, to the period of the source of impulses or alternating electromotive force. See SYNTONY.

res'pi-ra'tion (rĕs'pĭ-rā'shŭn), *n.* [L. *respiratio*: cf. F. *respiration*. See RESPIRE.] **1.** Act or process of breathing; inspiration and expiration; the drawing of air into the lungs for oxygenating and purifying the blood, and its subsequent exhalation. The term designates both a single inspiration with the following expiration, and the continued repetition of these acts which constitutes breathing. In ordinary inspiration the muscles chiefly used are the diaphragm, which enlarges the capacity of the chest by becoming flatter as it contracts and pressing down the abdominal viscera, and the external intercostals, levatores costarum, and others which raise the ribs. Expiration, unless forced, takes place chiefly by the return of the parts to their natural position of rest. But a small part of the total air in the lungs is replaced in an ordinary respiration. See TIDAL AIR, RESIDUAL AIR, COMPLEMENTAL AIR.

2. *Physiol.* The osmotic and chemical process or processes by which an animal takes in oxygen and gives off the products (esp. the carbon dioxide) formed by the oxidation which goes on in the tissues. Land animals take oxygen from the air, aquatic forms utilize that dissolved (not that chemically combined) in the water in which they live. In small and simple organisms there are no special breathing organs, and the process takes place over a whole or a part of the body surface. Larger and more complex animals have special organs (see LUNG, 4th GILL, 1) for this function, though some respiration may take place through the skin, and the blood carries the oxygen to, and the waste products from, the tissues. See BLOOD, HEMOGLOBIN.

3. *Plant Physiol.* The process of gaseous diffusion and interchange between the intercellular spaces of plant tissue and the atmosphere. The term is extended by some physiologists to include the metabolic activities of the cell in consequence of this interchange. Cf. ENERGESIS.

The *internal* respiratory nerves are the phrenic nerves, the *external* are the posterior thoracic nerves. — **r. pigment**, *Physiol.*, one of a class of colored substances, found mainly in the blood of animals, which have an affinity for oxygen and thus aid in respiration, as hæmoglobin. — **r. plate**, *Zoöl.*, a platelike expansion of the body wall of an insect larva or other aquatic invertebrate, serving as a gill. — **respiratory tree**, *Zoöl.*, an internal, arborescent, usually paired, tubular appendage of the cloaca of certain holothurians. Also applied to the intestinal cæca of starfishes and other echinoderms.

immediate instrument of vision, being connected with the brain by the optic nerve. The retina of the human eye lines the posterior chamber. Its functional part extends forward nearly to the ciliary body and is composed of supporting tissue and nervous elements arranged in several layers (see *Illust.*), of which the sensory layer (layer of *rods and cones*) is almost the outermost, and is composed of small rodlike bodies interspersed with shorter conical bodies, both of which are the specialized terminal parts of elongated neuro-epithelial cells. The most sensitive area on the human retina is a small *yellow spot* (*macula lutea*), having a central depression (the *fovea centralis*), in the middle back part of the eyeball. No rods, but only cones, are found in the fovea centralis; no fibers of the optic nerve overlie it; and upon it the image is focused for acute vision. See EYE, def. 1 & 2d *Illust.* Cf. Revolutionary calendar, the calendar of the first French republic. It was substituted for the ordinary calendar, dating from the Christian Era, by a decree of the National Convention in 1793. The 22d of September, 1792, the day from which the existence of the republic was reckoned, was also the date of the new calendar. The year, beginning at midnight of the day of the autumnal equinox, was divided into twelve months of thirty days, with five additional days (*sansculottides*) for festivals, and six in every fourth year. Each month was divided into three decades of ten days each, the week being abolished. The names of the months, with their English significance, and the approximate dates of their commencement, are as follows:

Vendémiaire	Vintage	Sept. 22	
Brumaire	Fog	Oct. 22	
Frimaire	Sleet	Nov. 21	
Nivôse	Snow	Dec. 21

Prairial	Pasture	May 20	
Messidor	Harvest	June 19	
Thermidor, *or* **Fervidor**	Heat	July 19	
Fructidor	Fruit	Aug. 18	

The five regular sansculottides were dedicated respectively to the Virtues, Genius, Labor, Opinion, and Rewards; the sixth, of leap years, was called "the day of the Revolution." This calendar was abolished by Napoleon in favor of the ordinary one at the end of the year 1805. — **R. Tribunal**, *F. rhythm (rĭth'm; rĭth'm; 277), *n.* [F. *rhythme, rythme,* formerly *rithme,* L. *rhythmus,* fr. Gr. ῥυθμος measured motion, measure, proportion, fr. ῥεῖν to flow. See STREAM; cf. RIME verse.] **1.** (*pron. in 17th c.* rim). Rime. *Obs.* **2.** *Chiefly Pros.* **a** The movement of uttered words as marked by the succession and alternation of long and short, accented and unaccented, syllables and by the position of pauses; the recurrence of stress dividing verse into a regular succession of arses and theses, and giving characteristic accentual phrasing to either verse or prose. **b** The particular kind of such movement as determined by the kind of metrical feet used; as, a dactylic *rhythm.* Rhythms were classified by Greek and Roman metricians as: (1) *equal,* when the number of moræ, or "times," in the thesis and arsis were equal, as in the anapæstic and dactylic rhythms; (2) *double,* when the thesis had twice the length of the arsis, as in the iambic and trochaic rhythms (see DIPLASIC); (3) *hemiolic,* when the thesis had one and one half the length of the arsis, as in the bacchiac rhythm. **c** Rhythmic expression. **d** A foot. *Obs.*

3. *Music.* **a** Symmetry of movement as ordered by recurrent heavy and light accent; accentual structure. Musical rhythm is based on the succession of beats or time units (marked — in *Illust.* below), within which periodically recur accents of various degrees of stress (marked ›, ≳ below). Added prominence is often given to an accented beat by a slight prolonging of the accented tone that begins it, or by making this tone fall in a principal chord of the key. The simplest rhythms are those thus marked off into groups of two or three beats each. Thus:

Compound rhythms are made up of combined simple groups by giving added prominence to the accented beat of one of them. Thus:

b A symmetrical and regularly recurrent grouping of tones according to accent and time value; a time-and-accent figure forming a distinct group that may combine with others into larger forms, as periods, etc.; as, a fandango *rhythm.* See FANDANGO, 1, *Illust.* Rhythms are often described according to the number of measures which they occupy, as *monometer, dimeter, trimeter,* etc.

In this sense every germinal musical thought — or, technically speaking, motive, — consisting of a few notes, or of notes and rests, and more or less sharply outlined by means of a cæsura, is a *rhythm.* *J. H. Cornell.*

c A particular typical accent pattern that groups the beats of a piece or movement into equal measures; — more accurately called *meter.* See TIME, *n.*, 13 a.

Syn. — RHYTHM, METER, CADENCE. RHYTHM, the general term, applies to measured and balanced movement, wherever found, as in poetry, music, dancing, and the like. In mammals ribs are exclusively or almost exclusively restricted to the thoracic region. In man there are normally twelve pairs, classified into *true* and *false* ribs (see under adjectives). A typical mammalian rib articulates with the centrum of one or two vertebræ by a terminal *head,* a short distance from which is a low eminence or *tuberosity* for articulation with the transverse process of a vertebra.
